SUMMARY

Backend Developer with 2+ years of experience building scalable backend systems and RESTful APIs. Strong expertise in PHP and Laravel, with solid knowledge of MySQL, database design, authentication, and authorization. Skilled in designing business logic and building clean, maintainable backend architectures.

CORE SKILLS

Backend Development: PHP, Laravel, RESTful APIs, API Design, Business Logic

Database: MySQL, Database Design, ERD, Query Optimization

Authentication & Security: Laravel Sanctum, Authorization, Middleware, RBAC

Tools & Practices: Git, GitHub, Postman, Swagger, Clean Code, Agile/Scrum

EXPERIENCE

Backend Developer – Personal Projects

- Developed backend systems for hotel management, e-commerce, and charity management applications using Laravel, PHP, and MySQL.
 - Designed and implemented RESTful APIs, database structures, authentication, and role-based access control.
 - Built business logic and service-layer architecture focused on scalability, reliability, and clean code.
-

KEY PROJECTS

Integrated Hotel Management System

Technologies: Laravel, PHP, MySQL, RESTful APIs, Laravel Sanctum, Service Layer, RBAC

- Built the backend connecting customers, hotel management, departments, and staff, with APIs for bookings, service requests, and task management.
- Implemented separate authentication flows for customers and staff, and an automated task distribution system based on staff availability and workload.

E-Commerce Platform & Admin Dashboard

Technologies: Laravel, PHP, MySQL, RESTful APIs, Laravel Sanctum, Design Patterns

- Developed the backend for an e-commerce app and admin dashboard, with APIs for products, cart, and order management.
- Implemented authentication, role-based access control, and reusable backend components following clean architecture.
